DETAILED ACTION

Specification

- 1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
- 2. The use of the trademark DUROPLAST has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent

Art Unit: 2834

protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 1 recites the broad recitation an electric motor, and the claim also recites "in particular an external rotor" which is the narrower statement of the range/limitation.

Claims 2-13 and 15-20 are vague and indefinite because the "motor connection section" is vague and indefinite. It is unclear from the claims, drawings, and specification which part constitutes the motor connection section. For the purpose of advancing prosecution on the merits the examiner will assume the motor connection section is the motor carrier connection section 24.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

⁽b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2834

- 6. Claims 1-7 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Hartmann (EP 848 477). Hartmann teaches a motor having a stator 1 which is latched 2.3 and supported only by the elastomeric dampers 2, 3 forming a symmetrical web. Hartmann teaches a plug in carrier 4 coaxial and radial outside the stator, which inherently compresses the damper axially and radially between the carrier 4 and the stator 1. The elastic element 2,3 is frictionally held and locked into place by a spring clamp latching element 2.4. Hartmann teaches a locking hole (groove) 4.1 for the mating with the tongue 3.1 to circumferentially lock the dampers. Hartmann shows the carrier 4 including a bottom wall (forming a pot) with the stator connecting section integrally connected through the damper.
- 7. Claims 1-7 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Bosch (GB 2258766). Bosch teaches a motor having a stator 10 which is latched 48, 50(tongue and groove connection) and supported only by the elastomeric dampers 44 forming a symmetrical web. Bosch teaches a plug in carrier 24 coaxial and radial outside the stator, which inherently compresses the damper axially and radially between the carrier 24 and the stator 10. The elastic element 44 is frictionally held and locked into place by a spring clamp latching element 48,50. Bosch shows an axially connection plug in figure 1.

Application/Control Number: 10/674,170 Page 5

Art Unit: 2834

8. Claims 1-4 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Boucheret (US 6098948). Boucheret teaches a plug in motor with a stator 6, a carrier 2 with latching means 25,26, and indirect support through elastic damper 15.

Claim Rejections - 35 USC § 103

- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 10. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 11. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hartmann (EP 848 477) and Sturm (DE 44 01 397). Hartmann teaches every aspect of the invention except the stator support section being a duroplast insulator. Sturm teaches a stator with a duroplastic housing. It would have been obvious to a person of ordinary

Art Unit: 2834

skill in the art at the time of the invention to construct the motor of Hartmann with the stator support section 1 being duroplastic because Sturm teaches that the stator housing is preferably a insulating resin and because selection of a material based on intended use is within the ordinary skill in the art (See *In re Leshin*, 125 USPQ 416).

12. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hartmann (EP 848 477) and Takakura (JP 2001-54253). Hartmann teaches every aspect of the invention except the outer ring with spokes elements. Takakura teaches a motor with outer rings 12 and spoke elements 11 to provide a motor holder for a blower fan. It would have been obvious to a person of ordinary skill in the art at the time of the invention to construct the motor of Hartmann with the outer ring of Takakura to provide a motor holder for a blower motor.

Allowable Subject Matter

- 13. Claims 8 and 10-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 14. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl I.E. Tamai whose telephone number is (571) 272 2036.

Art Unit: 2834

The examiner can be normally contacted on Monday through Friday from 8:00 am to 4:00 pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Darren Schuberg, can be reached at (571) 272 - 2044. The facsimile number for the Group is (703) 872 - 9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
